

Project 3 Blog:

To say I struggled in this assignment would be an understatement. I think doing an investigation caused me to severely misallocate my time and I ended up having to cherry pick information from lecture notes and reviews, rather than learn everything. I would have like to run the investigation later but that's water under the bridge. This time around, I really felt like I didn't absorb information, especially in the webapp/streamlet part. Seeing everyone's beautiful art made me feel super inadequate, and I tried my best to make it up in the extra time given to submit the code. I would however, like to acknowledge the massive difference in tableau and streamlet against flask: the latter is just inherently less pretty in my honest opinion. Also, some datasets on kaggle suck even if they're accurate, because that data can be nondescript and frankly inapplicable to the real world. Also how on earth did so many tests yield 100 percent accuracy? Something must have been fabricated and I don't like it. I didn't get to prepare for the presentation as much as I would have liked to and I stuttered a ton at the beginning before really getting into the flow of things. Hopefully my grade isn't too bad for this assignment; I did spend many sleepless nights trying my best to scrape information together.
